

# AI Construction Management — For GCs & PMOs

Field measurements → consistent estimates → AIA■style progress billing.

## Why it matters

- Verify site conditions fast with LiDAR room scans and photo notes.
- Generate job-ready quantities when drawings are missing or outdated.
- Push change orders (adds & deducts) with an auditable trail.

| Outcome          | What you get                                 |
|------------------|----------------------------------------------|
| Faster starts    | Walk the site and price work the same day.   |
| Fewer rejections | GC requirements baked into pay apps and COs. |
| Team alignment   | PMs, Supers, and Subs work from one source.  |
